

Abstract of the Disclosure

5 An Internet-enabled appoint and reservation service system includes
an Internet-connected appointment server executing a software suite, and
one or more subscribing businesses to the service, the businesses having
receiving apparatus enabling receipt of appointment schedules from the
appointment server. The appointment server presents an interactive interface
to browsing clients, the interactive interface enabling the clients to select the
10 businesses and make an appointment or reservation with the businesses, and
wherein the appointment server periodically provides updated appointment
schedules to the subscribing businesses via the receiving apparatus.
Subscribing businesses may operate with a personal computer connecting to
the server. Businesses are grouped on the server into geographic groups and
15 clients are enabled to select groups, then individual businesses, and then to
accomplish appointments.
